

Available for Private Label

Liftoff™

Alkalinity Agent • Compatibility Agent • Penetrant

Principal Functioning Agents:

Tetrapotassium pyrophosphate, alkyl polyglucoside, ammonium hydroxide	12.00%
Constituents ineffective as spray adjuvants.....	88.00%
Total.....	100.00%

All ingredients are exempt from the requirement of a tolerance under 40CFR 180

FUNCTIONS

- ✓ Alkalinity Agent
- ✓ Compatibility Agent
- ✓ Penetrant

FORMULATION

- Liquid

APPLICATION RATE

- Add 16 fl. oz. to 4 qts. per 100 gallons of spray solution to obtain pH of 10-12 (Final rate TBD)

pH

- 10.5 – 12.0 (1% dilution in distilled water)

WEIGHT

- 6.60 – 8.76 lbs./gal.

APPEARANCE

- Clear Brown liquid

STORAGE

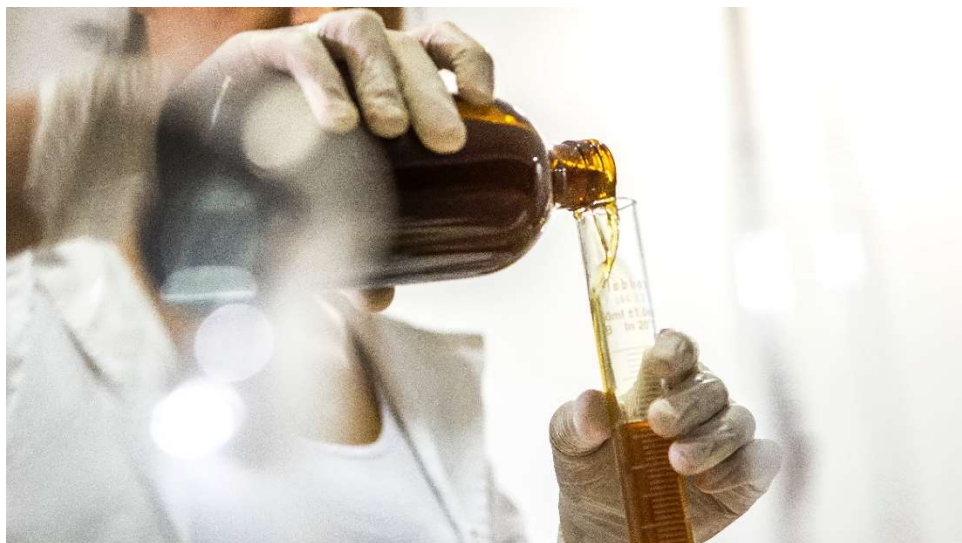

- TBD

CA & WA STATE REGISTRATIONS

- Not yet submitted

OTHER

- Not for aquatic use

Liftoff is a multi-function adjuvant formulation that delivers an alkalinity agent, compatibility agent, and penetrant in a single product. It is engineered for use with sulfonylurea (SU) herbicides and other pesticides where a higher pH is required to improve the solubility of many pesticides.

The surfactant properties in Liftoff optimize the retention and absorption of many herbicides for maximum field performance.

Key Features:

- Ideal for use with sulfonylurea (SU) herbicides in cereal grains, corn, and other crops.
- Functions as an alkalinity agent to increase and buffer the pH of spray water to increase herbicide solubility and bioavailability.
- Utilizes an NPE-free non-ionic surfactant for increased crop safety and enhanced weed control.
- As an added benefit, increasing the solubility of sulfonylurea products may also aid in spray equipment clean out.
