SEED TREATER ATOMIZING FIXTURE

AN AFTER-MARKET SEED TREATING ACCESSORY

The **EZ-MIZER™** is designed to replace basket-type atomizers found on many popular seed treating systems. The **SLEEK-SPIN™** design of the **EZ-MIZER** is much less susceptible to the build-up and accumulation of treatment slurry and fugitive residue that can accumulate basket-type atomizers if not properly maintained.

Here Are What Some EZ-MIZER Users Have To Say:

"It was great, there was no build up at all. What we would normally clean out 15 to 20 times a season with the old atomizer, we never had to clean out once with the new **EZ-Mizer**." ~ Johnny Owens of Meherrin Ag, Mullins, SC

"The **EZ-Mizer** was very easy to install. What usually took several hours to clean the atomizer and surrounding area only took a little over a half hour. Very happy with the performance and made clean up so much easier." Adam Balk of Poynter's Ag, Sawyer, ND

"It's good...perfect...a trouble free addition...like it and it works very well!" Allan Jaspers of Vance Ag, Steamboat Rock, IA

"Definitely better coating; very nice. For sure a lot quieter, a good investment and even keeps the chute cleaner!" Levi Willey of Jackson Jennings Coop, Seymour, IN

EXAMPLE OF A POORLY MAINTAINED BASKET ATOMIZER

EZ-MIZER Kit Includes:

- SLEEK SPIN™ Atomizing Wheel
- TURBO-CLEANSE™ Surface/Stain Cleaner
- Necessary Wrenches and Screws
- Thread Locking Compound
- Installation Instructions

EZ-MIZER has been tested and approved for use with SYNGENTA seed treating products.

INSTALLATION IS QUICK AND EASY!

Take Off the Old Basket Atomizer and Replace It With the EZ-MIZER!

Installing the EZ-MIZER and Slurry Feed Tube

1. Replace the old basket atomizer with the new **EZ-MIZER SLEEK SPIN™**. The **EZ-MIZER** is affixed with two set screws*. Dab each set screw with thread-locker*.

2. Tighten the screws against the shaft with a 5/32" allen wrench*. Tighten firmly to assure that the **EZ-MIZER** is securely affixed.

3. Next, re-install the slurry feeding tube assembly (if it was required for removal). The atomizing chamber assembly may now be reassembled to complete the installation.
